

# Driver In-Cab Communication

The **R:COM® In-Cab Communication** feature provides cost effective and efficient message and job information to drivers. The job information feature combined with on-board GPS Satellite Navigation feature routes vehicles safely and easily to the required destination, thus saving money and maximizing fleet efficiency.

*“Our coast to coast truck load operation means that our drivers spend most of their working month on the road so our communication with them has to be ultra reliable and efficient. We chose R:COM because of its advanced features, reliability and overall it was the clear industry leader in our opinion. We have R:COM on our fleet of 2,400 refrigerated trailers and based on our experience running this product over the last two years it made the decision to choose R:COM for our trucks even more compelling.”*

**Russ McElliott**  
President, TransAm Trucking Inc.

## ENHANCED FEATURES

R:COM handles driver communication, job management and planning, driver routing/navigation and provides full back office visibility of job status.

R:COM provides flexible two-way driver messaging with support for standard messages, customer specific predefined 'Quick Messages' and multiple entry 'Form Messages'.

R:COM can send single or multiple job details and locations with navigation coordinates from the office to the drivers - simple and quick.

R:COM automatically programs the job destinations into the GPS Sat/Nav. The driver presses one button to select the next stop or mark a job as done, making their task safer, easier, more efficient and compliant with the law.

R:COM allows office staff to continuously monitor the progress of each job and also the estimated time of arrival (ETA) as reported by the in-vehicle GPS Sat/Nav application.

R:COM GPS Satellite Navigation is provided in partnership with industry-leaders Garmin or ALK (depending on the in-cab device selected).

R:COM Truck Friendly Routing (in partnership with Garmin and ALK/CoPilot) routes the vehicle depending on physical restrictions such as the vehicle's height, weight and length. The vehicle route will also be dependent upon road warning information such as steep hills, heavy cross winds, camber or sharp turns.

R:COM provides a range of in-cab terminals to suit customer needs and budget. R:COM supports the entire range of Garmin Nuvi devices for basic messaging and job management. For more complex operations where Form Messages or custom work flow screens are required then the TREQ in-cab terminal range is recommended.

R:COM in-cab driver terminals are rugged and have a common user interface designed for ease of use and minimal input to aid safety and efficiency.

# Driver In-Cab Communication

## GREATER SAVINGS

R:COM improves communication between your office staff and your drivers, saving time and money on costly back and forth phone calls.

R:COM eliminates time and fuel wasted by the drivers trying to find the destination.

R:COM improves job planning and people management making your operation more efficient.

R:COM improves safety and optimises vehicle utilization with smart easy to use navigation.

R:COM delivers significant fuel savings due to improved fleet utilization and reduced distance travelled.

## Feature Preview

R:COM provides comprehensive and user friendly messaging and job management features for the driver. Drivers love the simple and intuitive screens.

Program the in-cab terminal with a list of predefined commonly used messages (Quick Messages) to save your driver time and improve communication updates to the office.

Send job details to the driver with navigation coordinates to simplify the drivers day. The driver clicks one button and the GPS Sat/Nav will guide them to the destination. The estimated time of arrival is reported to the office live.

R:COM includes the ability to add customer specific screens, for example Vehicle Inspection reports or Incident reports. The customer can also design and upload custom data entry forms.

R:COM GPS Satellite Navigation is provided in partnership with industry-leaders Garmin or ALK (depending on the in-cab device selected). R:COM also offers Truck Friendly Routing which routes the vehicle depending on physical restrictions such as the vehicle's height, weight and length.
