Introduction

NexTraq provides reporting and alert functionality that enables you to optimize your fleet operations. Are you getting the most out of your NexTraq™ Fleet Tracking platform? This reporting guide was developed to illustrate the benefits of each report. With more than 25 reports and 17 real-time alerts, you gain greater visibility into your fleet operations. Set up alerts to be sent to you in real-time via email or access reports to benchmark and set long-term goals.

- Generate reports on the fly within the NexTraq platform
- Automate email report delivery to key managers
- Run reports for:
 - Any day, week or month
 - Custom day/date range using drop down calendar selector
 - Single mobile or fleets
- Generate, print and email reports in multiple formats:
 - Microsoft Excel
 - Adobe PDF
 - CSV Text
 - HTML

Let's get started.

Start/Stop Report

The Start/Stop report provides fleet managers with the vehicle's first movement of the day and all movement up to the vehicle's last stop of the day. This report contains data indicating start times of the vehicle and all stop positions. Analyze a vehicle's time spent in transit, the time spent at each stop and the number and locations of stops each day.

Increase your drivers' productivity by benchmarking this data and setting long-term goals. With the Start/Stop report, you can:

- Use the report as a virtual timesheet to verify hours worked
- See the address location of all of your vehicles' stops to help with job validation and customer disputes

"Quickly doing the math, we realized we were saving tens of thousands of dollars just on the Stop/Start report alone." – Dion Calheta, Project Manager for Capeway Roofing Systems

Detailed Activity Report

The Detailed Activity report provides an itemized report of all activity for one vehicle for the time period selected (day, week and month). This report allows you to identify driver behavior, whether good or bad, to determine if disciplinary action needs to take place.

Additionally, you can pinpoint vehicle location and status for any time of the day.

Fleet Status Report

The Fleet Status report takes a snapshot of your fleet. This is an excellent tool for locating the closest vehicle to a point, determining which vehicle may be available or receiving an update on the location of all of the vehicles in your fleet.

Improve customer service by locating the closest vehicle to a job and identify what vehicles are available for new jobs or calls. Additionally, with this report, you can reduce vehicle mileage and improve dispatching and job response time.

Begin/End Day Report

The Begin/End Day report contains the starting point and ending point for the selected vehicle(s) for the time frame specified (day, week and month). With this report, you can determine a driver's start of the day and end of the day as well as the number of hours worked. You can also use this report as a driver's 'virtual' timecard to better identify and manage overtime hours.

“Overtime hours were reduced by 50%, saving Accardi Foods more than \$80,000 a year in overhead costs.” – Joe Russo, Director for Accardi Foods

Mileage by State Report

The Mileage by State report displays the distance traveled in each state by specified vehicles based on options selected. The report also totals the distance traveled by all reporting vehicles.

This report is often used to audit and confirm International Fuel Tax Agreement (IFTA) tax submissions. With the Mileage by State report, you can prepare your quarterly IFTA reporting and reduce state mileage auditing and research for quarterly IFTA submissions.

“We are able to effectively fight false citations and lawsuits and can accurately report mileage to the International Registration Plan and adhere to the IFTA through the data we can analyze and report on with the NexTraq platform.” Evelyn Herzog, Fleet Administrator for Landscape Concepts Management

Report Subscriptions

The Subscriptions option on the Report tab allows you to create daily, weekly or monthly subscriptions to any of the reports available. A subscription automatically generates and sends a report with the parameters you set to a designated email address. You can choose to receive the report in PDF, CSV or Excel format. Subscriptions you saved will appear in the Report Subscriptions list.

Make managing your fleet easier with automated reporting.

Report Subscriptions

[Create Subscription](#) [Filter Subscriptions](#) [Remove Filters](#)

	Edit	Weekly fleet speeding report	PDF	

3/3 subscriptions found.

Fleet information is front and center so managers can optimize fleet operations. Set up subscriptions for relevant parts of the organization to implement fleet policies and goals.

Alerts Reports

Once Alerts have been created in the Alerts tab, the Alerts report tracks fleet detail whenever an alert has been triggered. Know instantly when important events are happening with your vehicles and alert managers to change driver behavior.

“Through the alert functionality within the NexTraq platform, I receive a text message if any vehicle in our fleet moves before 5 a.m. In fact, I was able to use NexTraq to notify the police that a theft had occurred. One of our managers was watching the vehicles’ movement on the NexTraq application and was able to guide the police to the vehicle in time to arrest the thieves.”
– Jeff Dumas, Vice President of Acres Group

Begin/End Day Summary Report

The Begin/End Day Summary report provides averaged data and grand totals by fleet or by all mobiles to highlight trends and general usages. The Summary report includes hours and miles driven for the time period specified.

The Begin/End Day Summary report includes a driver's total hours and the days they were active within your specified time period. It also includes averages for day length, begin time, end time and miles as well as totals for miles and hours.

Begin/End Day Summary Report for Brandco

Driver Assignment History Report

The Driver Assignment History report displays all driver assignments by driver, mobile, or fleet. This report displays assignments entered manually, as well as those generated by the in-vehicle Automatic Driver Assignment solution. This hardware allows drivers to be associated to vehicles without the need for them to be linked manually on the platform and provides management with accurate, driver-based reporting.

This report shows which driver was with which vehicle and provides a summary of that driver's assignment start and end times. This history report can be run by Mobile, Fleet or Driver and shows the drivers' names, the date and time they started an assignment, the date and time they ended an assignment and the total time they were assigned to that particular vehicle.

All other reports that mention drivers (such as the Stat/Stop report) will also be able to be generated by driver.

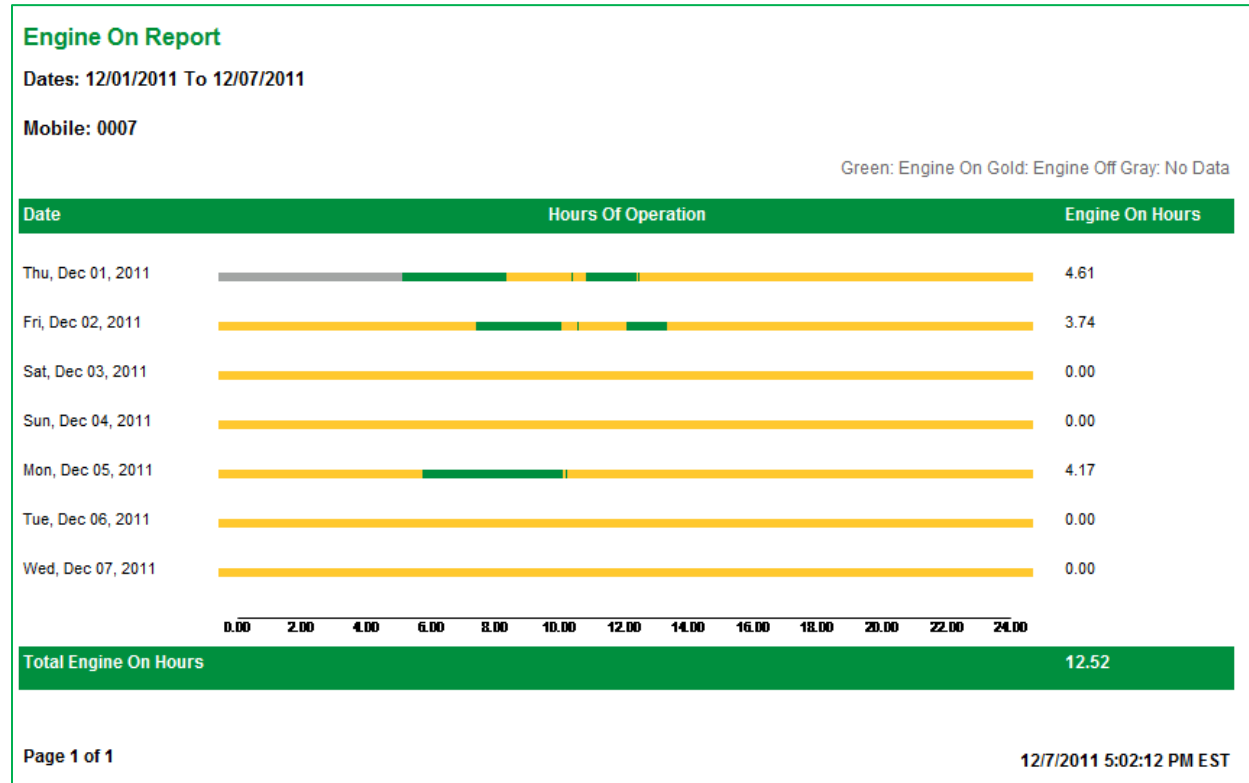

Driver Assignment History			
Dates: 11/18/2011 To 12/01/2011			
Fleet: All Mobiles			
Mark			
Driver Name	Start Date (Effective Date)	End Date (Effective Date)	Total Assignment Time

Total Drivers: 1			Total Assignment Time: 6:23:59:59

Engine On Report

The Engine On report provides a color-coded description of an individual mobile unit's engine status on a 24-hour timeline. Green indicates Engine On status. Gold indicates Engine Off status. Gray indicates that this time period is prior to the first reported track and no data was available. This report is useful for confirming hours of use for heavy equipment assets.

Note that if the last track of the day was Engine On, then the Engine On color (green) continues on the start of the next day until there is a track indicating an engine state change. If the last track of the day was Engine Off, then the Engine Off color (gold) continues on the start of the next day until there is a track indicating an engine state change.

Engine On Summary Report

The Engine On Summary Report provides a summary of engine on/off time for each selected mobile or fleet. This report is useful for units installed on heavy equipment assets.

This Summary Report includes the fleet and mobile names, the number of hours that the engine was on, off or in an unknown state as well as the last location and status. Note that the number of hours between the start of the first day in the selected time frame and the time of the first track for that time frame appears in the “Unknown State” column.

Engine On Hours Summary Report					
Dates: 12/01/2011 To 12/07/2011					
Fleet: A					
Mobile	Engine on Hours	Engine off Hours	Unknown State	Last Location	Last Status
5630	11.81	108.26	47.93	A K Steel Entrance Rd	Engine Off
5631	17.95	140.03	10.02	2242 Highland St	Engine Off

Fleet Summary Report

The Fleet Summary report contains summary information for a specific time frame for each vehicle in your fleet.

A report row is created for every vehicle in the fleet even if there has not been activity for the vehicle during the reporting time frame. User populated MPG vehicle and fuel cost information is incorporated in the Fleet Summary report, providing a view on how much fuel is being consumed and your overall fleet operating costs.

You can view overall fleet performance and vehicle activity associated with your fleet. Determine fuel consumption associated with vehicles for a certain time period to benchmark this data and decrease your fuel cost and carbon footprint.

Fuel Card Purchase History Report

The Fuel Card Purchase History Report is for clients that have integrated their fuel card data with the NexTraq platform. This report provides a full summary of all fuel related purchases simplifying retrieval of fuel card data and allowing for vehicle by vehicle fuel usage comparisons so companies can improve fuel efficiency and eliminate abuses.

The purchase history report lists fuel and non-fuel purchases and can be run by Mobile or Fleet. A report row is created for every purchase and lists the driver, the purchase date, the merchant name and the location of that merchant. It also lists any non-fuel purchases, the price per gallon for the purchase, the total gallons purchased and the total fuel purchase amount.

The Fuel Card Purchase history Report also includes a summary that lists a vehicle or fleet's Total gallons purchased as well as the total fuel purchase amount.

Idle Report

The Idle report provides an accurate way to monitor idle time greater than a time period you have pre-determined. There is a report row for every start/stop event. In this report, you also have the option to have the row in boldface when the stopped time exceeds an idle time limit you have set.

The Idle report also includes cost of idling based on gas prices and fuel efficiency that you set for your fleet. Identify high idling drivers and see how much money is spent while idling. Eliminate excessive idling and reduce fuel operating expenses.

“Because the drivers know their behavior and workday profiles are monitored, we have increased overall fleet productivity by 35% while reducing fuel costs by 20%.” – Paul Giglio, President of Pipe Works Services

IFTA Fuel Tax Report

The IFTA Fuel Tax report is for OTR (over-the-road) companies that have to submit a quarterly report to the International Fuel Tax Association (IFTA). This report provides much of the information needed for IFTA reports thus helping to simplify the process.

The IFTA Report can be run by Mobile or Fleet and by Fuel Type (Diesel, Gasoline, Ethanol, etc.). A report row is created for every state that was traveled in during a particular quarter and the IFTA miles traveled in that state. It also lists taxable miles and gallons, the tax rate for that state and the tax a company owes or is owed.

The IFTA Fuel Tax Report also includes a summary that lists Total IFTA and non-IFTA miles as well as total tax paid and average fleet miles per gallon.

IFTA Fuel Tax Report for Sandstone Freight

Location Report

The Location report details which vehicles have visited a saved location or zone. Saved locations tend to be customer addresses, job sites and client locations. Choose the reporting time frame and viewing format and then select any saved location or zone and mobile or fleet and view the report.

You can run the report for “all locations” or select a single location. If your NexTraq instance has more than 1,000 locations, or if location groups have been defined, you can narrow the list by selecting from available location groups. Similarly, if you prefer to run the report by zone, you can choose “all zones” or narrow the list to a specific zone group.

Identify how much time vehicles and workers spend on a job site or at home base. Increase productivity by managing vehicles and workers more effectively.

Location Summary Report

The Location Summary report identifies which vehicles have visited a saved location or zone. Saved locations tend to be customer addresses, job sites and client locations.

You can run the report for “all locations” or select a single location. If the account has 1,000 or more locations, or if location groups have been identified, you can narrow the list by selecting from available location groups. Similarly, if you prefer to run the report by zone, you can choose “all zones” or narrow the list to a specific zone group.

This report enables you to quickly identify which location or zones have been visited and with what frequency. You can also report on how much time a vehicle has spent at a job site or home base. Optimize routes and worker schedules by seeing work location and hours spent at a location.

Maintenance Schedule Summary Report

The Maintenance Schedule Summary report displays summary information for all maintenance schedules for a specific vehicle or for your entire fleet, depending on the options selected.

Use this report to ensure preventive maintenance is occurring consistently on schedule. Extend the life of your vehicles and ensure maintenance policies are being followed and met.

One NexTraq customer has been able to increase preventive maintenance tickets by 25%.

“Our fleet manager was extremely happy when we implemented this feature as he has less vehicle downtime, resulting in a more productive fleet operation.” – Joey Murphy, Vice President of Finance and Customer Service for Columbus Water Works

Speed Report

The Speed report shows a vehicle's speeding incidents over a defined speed threshold for the time period selected. Use this report to identify consistent speeding offenders or to initiate policies for driver safety. Reduce your liability and insurance premiums.

One leading ambulatory service provider did just that. The company was able to switch insurance providers and received a substantial discount when they implemented the NexTraq platform. In fact, the NexTraq Fleet Tracking platform paid for itself three times over in the first year.

“After the first half of the year, we are seeing pure profit from the NexTraq solution.” – Larry Riedel, Operations Manager for Eagle Medical Service

Taxi Fares Report

For transportation industry vehicles with a pickup/drop off sensor, the Taxi Fares report provides a record of the vehicle pickup and drop off time and location.

Improve your control over your fleet operations with extensive productivity and financial reports while complying with government reporting requirements.

Temperature Report

For vehicles with temperature sensors installed and properly configured, the Temperature report provides a record of temperature readings of the air surrounding the sensor. When maintaining a temperature within a specified range is critical, such as in a refrigerated truck, the report provides an easy method of monitoring temperature.

With the Temperature report, you can reduce product loss and increase profit as well as reduce claims and improve shipment quality. You can also verify cargo temperature throughout the trip if a claim is made. Mostly importantly, ensure that you are complying with government regulations.

Temperature Report for Cooler Pizza Dough

Dates: 07/29/2011 To 07/29/2011

User History Report

The User History report provides a record of when and how long a user is logged into the NexTraq platform. You may select a single user or all users for a specified time frame. When reporting all users, the report is listed alphabetically by the user's last name.

This report can help you determine the adoption rate of the NexTraq Fleet Tracking platform. Identify the training deficiencies and opportunities and increase your ROI.
