### Consolidate all of your consumer electronic payment and receivables information into a single source.

ePM from Jaguar Software gives your organization a web-based receivables processing system that allows you to more efficiently receive and process online payment activities ("Bill Pay Checks"). It's easy to use with multiple levels of access and security, web-based reporting tools and transaction search capabilities. ePM consolidates **all** of your electronic payment information from numerous payment processors into a single usable source.

## Online Receivables Processing

### Simplify online payment processing and gain faster access to your funds.

## How ePM can work for your organization.

Ever wonder exactly how online bill payment systems work? After consumers pay their bills online, commonly called "online bill pay", they are electronically sent to various payment processors for debiting from their checking accounts. The processor then mails the check to your organization. ePM eliminates the paper check which is mailed and received several days later. Instead the payment information is sent to ePM, which credits your account at your financial institution—funds three to seven days sooner. ePM also creates an automated accounts receivables file that is uploaded to your accounting system eliminating manual data entry. ePM's online reporting tool provides daily detailed transaction information, research, and reporting.

### ePM speeds up your payment processing and reduces administrative time and expense.

With electronic bill payments forecast to grow to 63 million households by 2014, your organization needs to gain control of this technology and take advantage of it. ePM does all that and much more. There's no capital investment or budget allocations needed to quickly help your organization deal with all of your online bill payer transactions from multiple processors. With automated daily accounts receivables updates sent to your accounting system, you'll significantly reduce your administrative time and expense.

### ePM is seamless, secure, and cost-effectively works for any size organization.
