

plans underway to transform emergency services at davis medical center

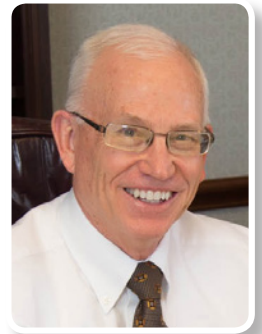

Davis Health System officials have announced plans to transform Emergency Services at Davis Medical Center. Tim Thorpe, Emergency Department Manager shared, "Over 28,000 patients access the Davis Emergency Department every year. The current ED is 20 years old and is not designed for today's health care delivery. It is too small and lacks privacy, which slows the time in which patients can be seen and reduces their satisfaction."

Innovative programs, state-of-the-art equipment and facilities, and expert caregivers will come together to completely transform the patient experience at Davis Medical Center.

- **FAST TRACK PROTOCOL** - Implementation of a specific program for non-emergency care that will shorten wait times for both emergency and non-emergency patients.
- **OPTIMAL STAFFING & PROCESSES** - Enhanced recruitment, staffing, and training will increase patient satisfaction, quality of care, and efficiency.
- **Renovation and Expansion** - The new Emergency Department will include almost 60% more space. The redesign will:
 - Create 15 private rooms and 4 semi-private rooms – providing a total of 4 more beds
 - Develop 2 new designated trauma bays to handle the most critical patients
 - Update medical equipment throughout the ED
 - Construct a new, comfortable waiting area

proposed plan

"Our Emergency Department is here 24/7 and turns no one away - regardless of their ability to pay."

- Mark Doak,
CEO of Davis Health System
