

New PrimAir™ Return Air Bulkhead Features and Benefits

Feature	Benefit	Additional Information
Lowest pressure drop	Most efficient unit operation of any one piece RABH	By reducing the pressure drop across the RABH the refrigeration unit works less to move air
Larger, specially shaped air intakes	Reduces resistance to air movement making the unit operate more efficiently	
HDPE material	High Density Polyethylene is durable and food safe	Both the White and Black RABH are made from HDPE
Hinged design	Allows access to evaporator for service without removing entire RABH	Refrigeration unit evaporator can be accessed by removing two screws and pulling down top of RABH
Flexible top section	Adapts to unit regardless of how far into the trailer it sticks without cutting	The flexible top section bends as needed to close off top of RABH to refrigeration unit
Integrated pallet stops	Prevents damage to RABH, refrigeration unit, and front wall of trailer by stopping pallets during loading	Pallet stops are made of durable HDPE
Optional debris screen	Prevents plastic wrap and other debris from blocking the evaporator coil for improved unit efficiency	These optional debris screens can be ordered preinstalled on either the white or black RABH. These can also be ordered and installed separately.
White colored RABH option	Matches interior of trailer for cleanest appearance	Many customers like to be able to see if the interior surfaces of their trailer are clean, making White the best color choice
Black colored RABH option	Provides contrast to front wall which prevents drivers hitting the front all	Some customers find this version easier to clean as dust and dirt is hidden by the Black material
10 lbs. lighter than original PrimAir RABH	Easier to handle during installation	
8.8" narrower than original PrimAir RABH	Easier to handle during installation
