

## *Closed Loop Cooling*

*For the TriPac™ Hybrid Auxiliary Idle Reduction  
and Temperature Management System.*

# Closed Loop Cooling for your TriPac™ System

*Allows your TriPac system to run independently of tractor engine coolant.*

- **Reduced installation complexity**
- **Emergency tractor alternator backup**
- **Runs independently of coolant system**

Closed Loop Cooling may be right for you if you frequently run where the average low temperature is above 32°F.

If you frequently operate in warm climates or simply prefer that the TriPac system not tie into the tractor engine coolant, choose the CLC option. The TriPac will run independently of the tractor engine coolant and still provide the battery charging and cab comfort options you demand. Closed loop cooling also provides emergency tractor alternator backup, which means your TriPac system can supply voltage for temporary tractor operation in case of tractor charging system failure.

**OE Equipment with TriPac System..... Option Number 005831**

### **Also Available as an Aftermarket Option:**

Convert an existing standard TriPac system to a Closed Loop Cooling system. Allows for easier installation when system is moved to a different tractor.

**Aftermarket Option.....Part Number 10-418**
