

## COVERAGE GUIDELINES

~3-4 lbs. per 1,000 sq. ft. on overseeding  
 ~6-8 lbs. per 1,000 sq. ft. on new seeding  
 Less if heavy on Bluegrass

## PLANTING TIPS

1. Grass seed should be planted with 1/8" to 1/4" soil coverage.
2. Soil should have good moisture and be in close contact with seed. Seed to soil contact is critical.

Moisture: Top 1-2" of soil should be moist (not wet) for germination.

3. Fall is the best time to seed.
4. If "Control" products have been applied to turf, check label before seeding. There can be as much as a 16-week waiting period.
5. Use a "Starter" fertilizer for new lawns. These contain more phosphorous and potassium, which new lawns need to prosper.

## SEEDING GUIDELINES

Soil temp and watering are key components in new seed germination

	Days until germination*	Texture	Shade tolerance	Wear tolerance	Drought tolerance
<b>Kentucky Bluegrass (RhiZomes+) Tillers</b>	21+	Fine/Medium	Poor	Medium	Will go dormant but, with intermittent watering, will come back
<b>Creeping Red Fescue</b>	14-20	Fine	Medium/High	Medium	Good
<b>Tall Fescue (Bunch)</b>	14-20	Course	Medium	High	Good. Needs watering in extreme conditions
<b>Chewing Fescue (Bunch)</b>	14-20	Fine	High	Medium	Excellent
<b>Perennial Rye</b>	7-10	Medium/Course	Low	Medium	Will go dormant but, with intermittent watering, will come back

\*Under ideal conditions
