

Personalized care plans.  
24/7 support.  
Families reunited.

## PromptCare Respiratory's Invasive Pediatric Ventilation Program

PromptCare®. Helping Medically Complex Pediatric Patients Thrive.

“Thanks to the professionals at PromptCare, Ben is thriving at home – and he recently spoke his first words. They’re always there to assist us. This company truly lives up to its name.”

- Jim, whose son, Ben, was diagnosed with Down syndrome in utero

Meet Ben. After spending more than nine months in the hospital as a newborn, his family was able to transition him home on a ventilator, and secure a special valve for the machine, to help his speech become clearer. And PromptCare Respiratory was there with Ben and his family every step of the way, through its Invasive Pediatric Ventilation Program. The program focuses on reuniting families through care and clinical expertise, promoting growth and development, maximizing mobility, and enhancing family support. We work with each patient’s physician and family to develop a unique clinical plan of care that provides the best patient outcome at home. We also provide ongoing patient evaluation for changes in his/her need for ventilator support. His family was able to transition him home on a ventilator, and obtain a speaking valve to help his speech become clearer.

Program highlights include:

- Industry-leading technology and customized clinical reports for your most fragile ventilated patients
- A partnership with the family and physician to decrease hospital admissions
- An evaluation of the patient’s home environment for safety
- Improved communication between family and doctor
- Disease state management and patient ventilator training for their therapy
- Ongoing monthly visits by a PromptCare respiratory therapist to reinforce understanding and ensure therapeutic compliance
- Collaboration with the physician to initiate weaning from ventilator support
- 24/7 access to one of PromptCare’s Pediatric Respiratory Therapists
