

RETREADING

Reduce your tires operating budget at an average of 40 per cent. By choosing an application specific tread, you will increase fuel efficiency and wear out. Retreads provide some of the best off-road and winter traction available. Save the environment by recycling used casings. Seven gallons of oil are used in a retread vs. 22 gallons of oil in new. The Popular Tire Warranty backs all retreads supplied to you. We are able to create a casing program to specifically suit your needs and retread parameters. We offer a complete line of truck, industrial and OTR retread solutions and repair services.
