

BRINGING EQUIPMENT OUT OF STORAGE

1. Remove any left over fuel and refill with fresh ethanol free gasoline; www.pure-gas.org lists stations where it is available in your area
2. Check the condition of your spark plugs and replace if necessary
3. Check air filters for dirt and damage to determine if they need cleaning or replacement
4. Clean debris from blowers and trimmers
5. Inspect for broken parts, and replace any that are broken or damaged
6. Check screws and nuts, retighten as necessary
7. Sharpen or change saw chains and replace trimmer line
8. Lubricate parts where friction will occur
9. Check power cords on electric tools for damage or wear
10. Let the equipment warm up for a few minutes before using
